Project Proposal: Web Scraping for a Database of Court Decision Related Documents

Alec Schürmann

Mai 2021

Abstract

So far, no datasets of external documents related to Swiss federal court rulings have been collected. In order to provide a database of court decision related documents, promising online data sources will be identified. In a second step, the HTML of chosen websites will be analyzed and the documents will be scraped. Furthermore, the texts from the documents will be extracted and structured in a database. Finally the results will be evaluated in the context of the overarching research project "Open Justice vs. Privacy" to automate re-identification of involved people in court decisions.

gut

1 Introduction

To protect the privacy of involved people in Swiss court decisions, documents are anonymized. By linking the rulings with external data, previous research [5] has shown, that it is possible to re-identify companies involved in court decisions. In order to build an automated system for re-identifying people from court rulings, external data is needed. The goal of this project is to create a structured database from Swiss court decisions by scraping related online documents and extracting the data.

DOM and Xpath" from Gunawan, Rohmat and Rahmatulloh, Alam and Darmawan, Irfan and Firdaus, Firman [2] explains the importance of web scraping and compares three different web scraping techniques measured by their performance.

3 Tools

Either **Scrapy** or **BeautifulSoup** will be used for scraping the documents from websites. Both of them are based on Python. BeautifulSoup only parses and extracts data from HTML files, whereas Scrapy downloads, processes and saves the data. While Scrapy offers more speed and scalability, BeautifulSoup might be more fitting for the scale of this project, as the main use is content parsing. It will also require an additional content downloader to download those HTML files. [1]

4 Timetable

Sieht gut aus. Evtl. etwas ambitioniert
⇒ vielleicht besser bis Sept/Okt
einplanen
